## OBJECTIVE

To work under an environment where I can convert business solutions to stable product along with an opportunity to learn and innovate.

## EDUCATION

**St. Joseph Engineering College, Mangaluru**

Graduated on 2017

B.E in Computer science and engineering

## EXPERIENCE

**Senior Product Developer | Riverus, Pune**

Nov 2019 – Present

Lead a team of 3 developers for front end. Worked on Full stack development in stacks like Postgres, Scala, NodeJs and ReactJS

**Product Developer | Riverus, Pune**

Oct 2019 – Nov 2019

Trained and managed an intern(converted to full time employee) and built a team for all the front-end developments under React.

**Associate Product Developer | Riverus, Pune**

Oct 2017 – Oct 2019

Started as an intern here with the key responsibility of building React web applications from scratch.

---

## SKILLS & ABILITIES

ReactJS, Redux, NodeJS, Express, MySQL, HTML, CSS, Bootstrap, Scala, Postgres

## PROJECTS

### Income Tax Research Tool

First publicly released product of Riverus. This application gives access to a large database on Income Tax cases, Lawyers, Judges and various forums of India. This site was built responsively with a beautiful UI. Currently this is updated to 2.0 with feature upgrades and UI improvements.

### GST Research Tool

This application gives access to a large database on GST cases, Lawyers, Judges and various forums of India. This site was built responsively with a beautiful UI.

## SEVERUS

An annotator tool built for identification of Issues of a case. This tool also has portals which is used by the Data-Science team for data cleanup, HBF(Header-Body-Footer) annotation and delta updating of Database based on requirements. The second version of this application included A annotator tool for Mergers and Acquisitions along with a UI for chatbot.

### RiverusAuth

An authentication app which has the sole purpose of issuing tokens for various products of Riverus. This is a single-entry point for all the Riverus applications as well as serves as landing page of the company.

### LegislationApp(1.0)

WebAPI for Legislation product along with the Frontend App.

### React-Condom

A protective layer around your raw, unprotected components. In a claims-based authentication system, a user typically has his own claims and the component can have a rule. This currently is a one to one string equality check. If the rule in a component is available within the rule set (Claims) of the user, the component renders whatever is inside, else it falls back to the fallback component.

### Heimdall

A plug and play authentication system that is used throughout the Riverus products. This along with RiverusAuth builds a strong foundation for security w.r.t Frontend application.

### Riverus – legislation(Income Tax)

A sister product of Riverus income tax research tool. This contains access to the legislation rules, section and other products.

### **Riverus – legislation(GST)**

A sister product of Riverus GST research tool. This contains access to the legislation rules, section and other products.

### **Project RUM**

An internal user management system for Riverus. This has listing of all customers along with licenses attached to them. This app enables an internal user to attach, detach and upgrade a user to the product.

### **SuperSearch**

A Trademark product of Riverus which enables a user to pinpoint to a specific case in the database.

### **RUFI**

Riverus User Feedback Interface built for capturing errors, bugs and enabling the user to report issues and give feedback

### **Hedwig(Mailman)**

A cross platform application built over electron for collaborating with the development teams. This includes sharing of APIs that needs to be consumed by other teams. Also testing the API once it is written.

## **HOBBIES**

Fishing and Photography
